|---|---------------------|---------------------------------------------------------------------------------|---------------------------|----------------------------|
| 1 | Kerem Akdeniz       | main command loop, Makefile, fixes (renamed editFile→edit, saveFile→save, etc.) | Completed                 | -                          |
| 2 | İlber Eren Tüt      | ncurses UI, screen handling, print(), cursor movements                          | Completed                 | -                          |
| 3 | Merve Naz Dikme     | buffer.c, replace()                                                             | Completed                 | -                          |
| 4 | İpek Çelik          | edit(), save(), delete(), final fixes and code cleanup                          | Completed                 | -                          |
| 5 | İrem Irmak Ünlüer   | gc.c, insert()                                                                  | Completed                 | -                          |

### Difficulties/problems encountered:

Function name mismatches between implementation and PDF spec were identified and corrected (editFile→edit, saveFile→save, deleteLine→delete, insertLineAfter→insert, replaceChar→replace). A parenthesis bug in replace() was fixed. A typo in fileio.c (. ext → .next) was corrected. All components were successfully connected and tested.
